

Velia

 **EUREKA**

Tubes. Reimagined.

Create unique tubular arrangements with Velia luminaire. Display Velia in vertical clusters or as a suspended horizontal linear or showcase a standalone pendant as an elegant centerpiece. With a variety of lengths, configurations, and finishes to choose from, Velia lets you imagine and reimagine lighting to meet a space's specific aesthetics.

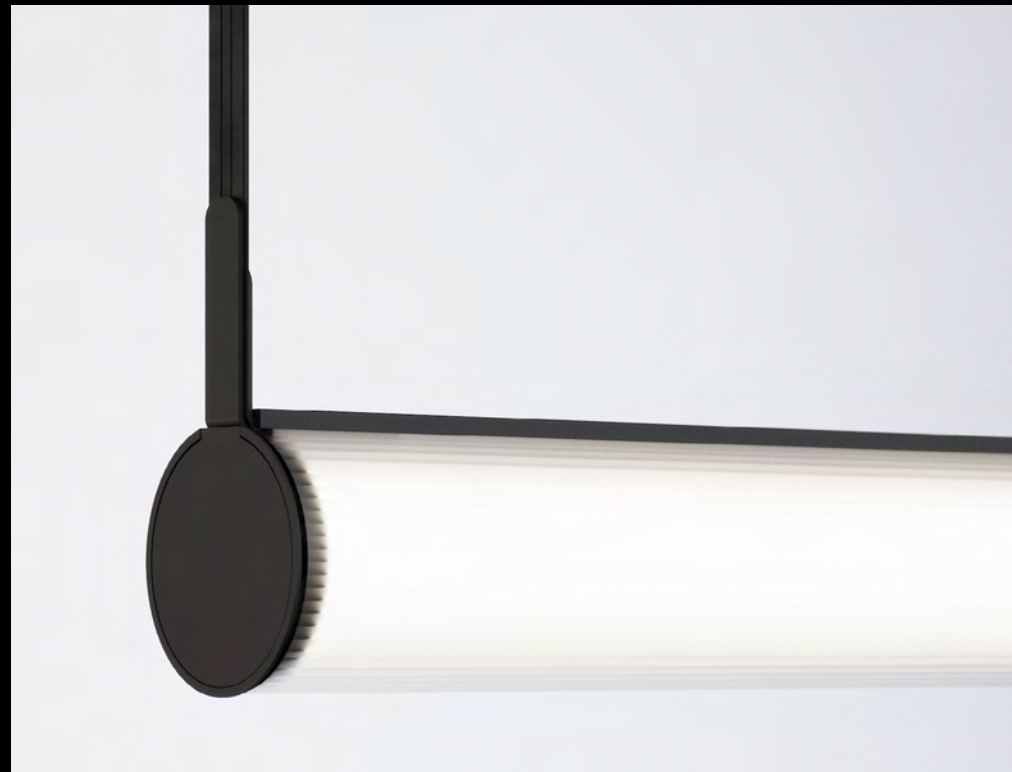

Straight up

Suspended vertically, Velia luminaires add visual interest to high-ceiling spaces. Aligned in a row or staggered in the space, they can be arranged to create distinctive lighting designs.

Take a closer look

At first glance, Velia is elegant and versatile tubular lighting with a sleek, modernized look. But a closer look reveals an attention to detail that imparts its true elegance. Two layers of optical film visually create the richness of glass, and Velia's unexpected flat cable adds a truly unique aesthetic.

It's the little details that make a big difference: the subtle lines of the linear outer film complement the sleek, flat cable.

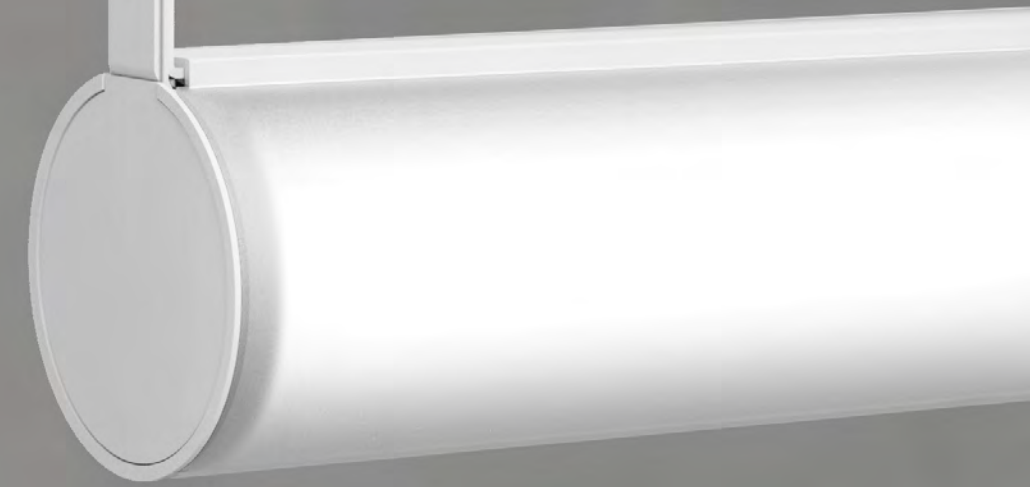

Linear finish

Prismatic finish

Frost finish

A selection of smooth finishes provides designers with even more choices to give each arrangement its own personality.

Sheer simplicity

Velia's suspended horizontal version makes a singular statement above a table in a cafeteria space or conference room.

Color splash

Velia is offered with a choice of interior film to add colors to the mix. Hues of amber add warmth and charm to hospitality settings. Vibrant pink or purple add pops of color in eclectic spaces. Gradients are also available to foster a calming, even romantic setting.

Create your own look by experimenting with outer film finishes and inner film colors. ▶

Showstopper

Velia enables specifiers to create signature clusters that play with light, color, scale, and texture. For custom clusters like this one, contact our factory: we'll help turn your creative vision into a stunning reality.

A luminous divide

Use a row of Velia luminaires, anchored to the floor, to create a unique visual division of a space. The optional anchor point is available for both single suspended and cluster configurations, preventing sway caused by air currents.

The magnetic anchor point assures that the flat cable is anchored to the floor but safely detaches if something or someone makes contact. Cable length can be adjusted at this anchor point to achieve perfect tension and alignment.
